Russia And The League Of Nations

Soviet Russia having applied for admission into the League of Nations, the burning topic at Geneva and in many of the European capitals is whether that application should be approved or rejected. Russia has the powerful support of Great Britain, France and Italy as well as of some other countries, but is opposed by a number of the smaller nations, including, so it is reported, Belgium, Poland and Greece, while Switzerland, the home of the League, is said to be sharply divided on the question. The London Times has expressed the belief that Canada and Ireland will line up with the opposition.

Unless unanimity can be reached through advance negotiations and conferences, the forthcoming meeting of the General Assembly of the League will be the scene of an animated, possibly bitter, debate, with the further possibility of the failure of Russia's application because an unanimous decision cannot be reached. It looks like a knotty problem to solve, yet most people in this country would be inclined to regard it as a very simple one.

It is not necessary to recite the reasons which led to the establishment of the League of Nations, nor to set forth its aims and objectives. Its very name implies that it was the intention of the founders that it should include not some nations, but all nations. As long as certain nations remain outside its membership, the League is not as strong as it should be. It is weakened by the absence of even one nation. In the past one of its great weaknesses has resulted from the refusal of the United States to join, plus Russia's absence and the early stipulation that barred Germany. Now that Russia is willing to come in, why refuse to permit it?

The only answer forthcoming is that the Government of Russia is Communist. Premier Tashirishvili of Greece is reported as saying that he will vote against Russia's election to membership on the ground that it would sanction international Communism. This may be offered as an excuse, but surely it is not a valid and legitimate reason for exclusion.

Italy is a member of the League, but that does not constitute sanction of international Fascism by the other nations of the world. Other nations may set up or bow to dictatorship or other forms of autocratic government, some might turn socialist, others become more and more democratic, and others again return to absolute monarchies. Such developments are the right and privilege of the people of the nations concerned, but they do not constitute reasons why they should be treated as outlaws among the nations of the world.

The people of any country have the sole right to determine their own form of government—that which in their opinion is best suited to their particular conditions or state of development. This is one of the fundamental principles underlying the structure of the League of Nations, namely, self-determination of peoples and nations. Failure to recognize it, and give effect to it, would quickly destroy the usefulness of the League and ultimately destroy the League itself as an organization.

There are times when, following internal upheavals and revolutions, a nation may lose the diplomatic recognition of other nations, but this is largely because the fact is not clearly established as to which of the contending groups really enjoys the support of the people in such country and can therefore be safely recognized as "the Government". But when a Government once becomes established, recognition of it by other nations as a rule quickly follows. The means by which it came into being, its principles and policies are a matter for its own people to approve or disapprove, and recognition by other nations does not necessarily imply approval.

The Union of Soviet Socialist Republics (Russia) has an established form of government; has had for years. It is recognized by most of the other nations. Agreeably or otherwise, it is accepted by the Russian people. What reason is there, then, why Russia should not be recognized by the nations acting jointly through the League of Nations and full membership in that body be granted to it? It is silly to argue that the granting of such membership in the League is to sanction international Communism. One might as well argue that to now admit the United States would be to give international sanction to all the policies and implications of Roosevelt's "New Deal," or the case of Germany to place the stamp of approval on Hitler and his Nazi policies and programs.

Regardless of what one may think of Russian Socialism and the policies and methods of the Soviet Government, and quite opposed as one may be to the introduction of similar policies and methods into their own country, people the world over should wish Russia well. It is far better for the world that Russia should succeed and not fail in its experiment, and certainly it would be unwise and cruel towards the Russian people to desire failure. Even though the Russian system may not be desired nor prove beneficial elsewhere, it may suit Russia in its present state of development.

The best way to promote international understanding and goodwill, and thus promote the cause of peace, is for the nations to get together—the closer the better. And the best way yet devised for such getting-together is in the General Assembly of the League of Nations. Therefore, let every nation in who is willing to join, and do everything possible to bring in those which presently are averse to joining.

Amphibia is a name given to the oldest altars of the Babylonian-minished and vision not re-ans which have been excavated are flanked by the use of glasses and in square heaps of sun-dried bricks, and many cases not accompanied by any Herodotus relates that their great visible secular changes.

Diarrhoea, Dysentery, Colic Cramps and Stomach Pains

Prompt treatment with Dr. Fowler's Extract of Wild Strawberry in such cases relieves the pains, checks the looseness of the bowels, and thus does away with the suffering, the weakness, and oftentimes the collapse associated with attacks of this kind.

It does this by checking the too frequent and irritating stools, settling the stomach, and bringing up the weakened system, thus making it a remedy for the treatment of bowel complaints of both young and old.

On the market for 88 years—you do not experiment when you use it.

Famed Racing Husky Dead

St. Godard mourns loss of Nine-Years-Old Team Leader

Emil St. Godard, world champion dog racer, mourns the death of his gallant leader Toby, one of the greatest dogs that ever stepped in harness.

Toby died at Teterborough, New Hampshire. The veteran of races across the continent suddenly suffered stomach trouble, and although three doctors worked on him they failed to save his life.

Toby was nine years old. He was part husky and part greyhound, a combination of staying power and speed. He was raised in the St. Godard kennels and won 28 long distance classics.

Toby led the St. Godard string in six of the gruelling 200-mile derbies between The Pas and Flin Flon. He was also well known to sportsmen in Ottawa, Quebec and New Hampshire.

"It's tough all right," said Emil, when friends heard the news. "Toby was a wonderful dog. I intended to leave him in August to start training again in New Hampshire. I will have to train a new leader. I have several of Toby's pups at the ranch and expect to work one of them in Toby's place."

DOCTOR SAID SHE MUST REDUCE

Fat a Danger to Her Heart

Overweight is not merely a matter of appearance—it affects health, too. Excess fat robs the system of energy the internal organs grow fat and slow down under the burden—and undue strain is put on the heart. Here is an instance. A woman writes:

"I have been treated by specialists who tried to reduce my weight, as I suffered from heart attacks. But no matter what they gave me, nothing would reduce my weight. Since talking to Kruschen, everyone wherever I go exclaims about how much flesh I have lost. I took it at first for rheumatism, and it has done me a world of good, as well as greatly reducing my weight. Before Christmas I weighed 224 lbs. Now I am considerably less—in fact, a coat I had worn last year I have had to take to be altered before I was able to wear it again. I have not really made any difference with my diet, so there is only Kruschen to thank." (Mrs. M. S.)

The six sals in Kruschen assist the internal organs to throw off each day the waste and poisons that encumber the system. Then, little by little, that ugly fat goes—slowly, yes—but surely.

Alberta In The Lead

Province Has Highest Marriage Rate In Canada

A bridegroom of 34 with a bride of 18, 19 brides under 16; three mothers who have borne their third child when but 16 years old; two men who married when they were more than 80 years old are some of the highlights of a report compiled from the vital statistics records of Alberta. The province has the highest marriage rate in the Dominion and the highest birthrate west of Quebec.

Englishmen are still the greatest progenitors, followed by Ukrainians and Germans. Alberta does not follow the majority, for November proved the popular month in which to be married.

Alberta boys apparently do not care to assume marital duties as readily as do the girls, for while there were only 70 grooms under the age of 21, no less than 1,416 girls of a total of 5,054 became brides before they reached their majority.

Blind Man Climbs Mountain

Portland Publisher Aided By Dog Makes Long Ascent

Although he is totally blind, Ed G. Robbins, publisher of a Portland weekly newspaper, has realized his long ambition of climbing the snow-capped summit of Mt. Hood. He was aided by his faithful police dog, "Toby," in making the long ascent.

Asked what he wanted to climb the peaks for, the blind editor said, "for the experience, man, for the experience!"

Scotland is testing the innovation of sending life lines by rocket ship from ship to shore instead of the other way around.

Japan Grows Own Wheat

Country Now Able To Supply Its Own Requirements

The Japanese government's five-year wheat growing project, inaugurated in 1932 by the ministry of agriculture and forestry to enable the country to supply its own requirements of the cereal, has achieved its objective two years ahead of time.

Estimates submitted at a conference in Tokyo of the chief officials of the wheat encouragement bureaus in the various prefectures showed the wheat crop in Japan this year will yield 44,819,500 bushels, while the estimated consumption of the country is 45,000,000 bushels.

Since the domestic crop is now practically equal to consumption, the officials have decided to relax their efforts to increase production and to concentrate their attention on effecting improvement in quality.

Although bread by no means supplants rice, which remains the staple cereal, it has been popular as a food for several years and army regulations prescribe mixing wheat with rice before boiling it for soldiers' rations. The wheat constituents counteract the tendency of polished rice alone to cause beriberi (kake) as it is called in Japanese).

Many households consequently now mix some wheat with the rice before boiling it for the family table with resultant good effects on the general health.

Due to the world rise in wheat prices, Japanese flour mills have been failing back recently chiefly on domestic wheat. It is likely that the mills will continue to import a fair quantity of Canadian and Australian wheat of qualities not yet produced there, for mixing purposes, for some time at least.

The Art Of Making Tea

Method To Use In Order To Obtain The Full Delicious Flavor

No beverage in the world is as universally popular as tea. It is used in nearly every civilized country and this delightful drink not only refreshes and invigorates the mind and body, but also serves as the medium by which people meet in a spirit of friendship and understanding the world over.

If the following directions (which were supplied by "Saluda" Tea) are followed, each cup will yield the full delicious flavor that makes tea so enjoyable.

1. Use a tea of fine quality.
2. Use fresh water always.
3. Use an earthenware tea-pot.

Scald out the pot to make it warm, place in it a level teaspoon of tea for every cup desired, and one for the pot. Add fresh boiling water. Allow to steep about five minutes and stir slightly before serving.

Tea made according to the above rules will be fragrant, delicious and completely satisfying.

Is Densely Populated

The most densely populated small area in the world is 112th street between First and Second avenues, New York. Miss Margaretta Wales, social worker, said. The block is only 700 feet long, but 2,790 people make it their home. Seventy per cent. of them, Miss Wales said, are on relief.

If you talk of a bridge expert you may mean a dentist, an engineer or a card player.

Britain's Best Customers

Annual Purchases Of Railways Run Into Millions Of Pounds

This distinction belongs to British railways, whose annual purchases include 50,000 different articles. Over 1,000 miles of track are laid or renewed yearly, for which 210,000 tons of steel rails, 4,000,000 sleepers, and 2,000,000 cubic yards of ballast must be bought. The 14,000,000 tons of coal consumed by 21,000 locomotives, steamships and hotels keeps a large section of the mining industry regularly employed; 3,800,000 yards of cloth are purchased from British mills for uniforms, 21,000,000 bricks, 62,000 tons of oil, 9,000 tons of paint and varnish, and a further 296,000 tons of iron and steel—all from British firms.

The sum of £16,800,000 is expended on the renewal and maintenance of permanent way and works, and £19,500,000 on locomotives, carriages and wagons.

THAT DEPRESSED FEELING IS LARGELY LIVER

Wake up your Liver Bile

—Without Calomel

You are "feeling pink" simply because your liver is pouring out two quarts of bile into your bowels. Digestion and elimination are both increased, and your entire system is being renewed.

What you need is a liver stimulant. Something that goes farther than bile, mineral water, etc., to stimulate your liver.

Floating Factory Designed To Produce Electric Power By Use Of Warm And Cold Sea Water

A unique floating factory designed to make tropical sea water produce cheap ice where it is most needed steamed out of Dundkirk harbor recently for its first test.

The experiment is to be conducted at Rio de Janeiro and it is there the ice's inventor, George Claude, 63-year-old Frenchman, awaits her. A few hours behind the ice ship sailed the SS. Myson, carrying a tube which, when fitted together, is one-half mile long, part of the ice-making equipment.

The ice ship is the 10,000-ton steamer, Tunisia, outfitted with a fantastic plant for producing electric power by the action of warm and cold water drawn from different levels of the sea.

This free power inventor intends to produce 1,000 tons of ice each day to cool the drinks and preserve the food of sweltering South Americans. It looks like a profitable enterprise, to M. Claude, whose capital investment is estimated at less than \$500,000.

On the deck of the floating ice factory are immense reservoirs and a complex system of pipes, turbines and refrigerating units and to supply these with the requisite sea water, differing temperatures is a sheet-tube a half-mile (700 metres or 2,260 feet) long and 2.5 metres (eight feet) in diameter.

M. Claude's new venture, with which he thinks Jules Verne would have been delighted, is the fruit of experiments at Ougree, Belgium, in 1928 and off the coast of Cuba in 1931 in which he used a similar tube to test his theory that man can harness force in warm and cold currents of the same sea.

The process, briefly, consists of making warm water from the surface of tropical seas boil by introducing it into a vacuum, utilizing the vapor to run turbines, and then condensing it with cold water drawn from the depths.

When the Tunisia reaches Rio de Janeiro, or some other point near the Brazilian coast, it will drop its long tube on-board, with an anchor to hold one end near sea bottom and a huge special float, nine metres (29½ feet) in diameter, to keep the other end above sea level. The Tunisia then will tie up to the buoy, connect its shipboard apparatus to the submerged pipe and commence, Claude hopes, its ice production.

Cannot Remove Noise

Engineers Will Have To Put Up With Locomotive Whistle

In a 2,000 word judgment, the board of railway commissioners for Canada decided that railway engineers will just have to sit there and take it. If the locomotive whistle rings in their ears, it's too bad, but the board can do nothing about it.

It all started when the Brotherhood of Locomotive Firemen and Enginemen asked the board to order railways to place whistles "where the sounds therefrom will not be injurious to the ears of the engine-men." The board heard many witnesses, instructed its men to ride in locomotives to test whistles with their own ears, investigated types of whistles and measured different engines.

The Solomon-like judgment was then rendered. It ended with these words: "It does not appear that anything can be done, unless the railway men find they can move this whistle forward and increase the distance between it and the cab windows."

Hordes Of Dragonflies

Children had to rush for shelter when hordes of dragonflies descended on the seaside town of Dunbeath, Denmark. Millions of the insects darkened the sky for several hours. They flew in people's faces and made walking impossible.

"So you want a job as proof reader?"

"Y'r, sir."

"And do you understand your responsibility?"

"Yes, sir, when y-o make a mistake I take all of the blame."

W. N. U. 2064

Houses Of The Future

Will Be Vastly Different From The Kind We Know

What will the homes of the future be like? asks a writer in the Birmingham Weekly Post.

Already in place of brick and stone walls it is possible to have hollow walls of metal-sustaining composition, forming rooms like vacuum flasks that can be kept at a steady temperature night and day. They can also be lined with soundproof materials, so that one can read or study in happy ignorance of what is going on in other parts of the house. Whether this is an advantage, of course, is a matter of opinion.

Another sort of house already in the realms of possibility is one of tinted or clear toughened glass. The great advantage of this is that its walls can be saturated with sunshine.

At the Building Research Station at Watford, England, a house is being erected that, if successful, will be impervious to all climatic conditions. One or two rooms are being formed inside a shell. Here all sorts of "weathers" are reproduced, so that requirements for combating excessive damp, heat and cold can be thoroughly tested.

It is not only in structure, however, that the houses of the future promise to come near to perfection. Life inside them should be a luxurious, not to say exciting, affair. Professor A. M. Low, the inventor, has fitted his own home with a marvelous array of labor-saving gadgets. Among them is a device for making the garage doors open at the sound of the professor's motor horn. A robot alarm clock five minutes before going off lights a spirit lamp for the morning tea; and there is an arrangement by which fires anywhere in the house will light themselves at a fixed time. But perhaps the most useful device of all is an indicator that shows when callers are coming up the garden path. Connected with it is another gadget for stopping the bell ringing if these callers are undesired.

No doubt at the present time a certain amount of risk attaches to such inventions. The professor was once testing a new gyroscope that was supposed to have enormous powers. He had! Simultaneously it ejected itself out of the window and the professor out of the door.

Tomb Fifty Centuries Old

What is described as a "beautifully-painted tomb nearly fifty centuries old" has been discovered by Professor Selim Hassan near the Pyramids. The tomb belonged to Tessen, presumably a member of the Council of Ten comprising the executive of the then Egyptian Government. The paintings, depicting high personages, birds and flowers, are in colors so fresh that they look nearly new.

British Professor Shows That Tree Cultivation Is Best Means Of Conserving Moisture Supply

A Necessary Precaution

Apples Need To Be Thoroughly Washed Before Eating

Health authorities are warning those trying to keep the doctor away by eating an apple a day that the doctor's services may be needed if the apple is not properly cleaned before eating. It is not sufficient to follow the time-honored schoolboy practice of giving the apple a scrub on the shirt sleeve.

All this comes about through a combination of circumstances. In these latter years the only good apples come from trees whose foliage has been sprayed with poison. In ordinary seasons most of this spraying is completed early and a normal rainfall probably has a part in washing away the residue of poison before the fruit ripens.

This year spraying was the more necessary because the drought, coupled with insect pests, and of course in a drought little rain washes the apples. So far no case of sickness or death has been ascribed to poisoning from eating fruit. It would be foolish to abandon the apple-eating practice from fear of spray poisoning.

But it is well enough to take the health authorities' advice and give the apple a bath. It is a wholesome practice anyway.

A Flourishing Industry

Bones Go Through Many Stages To Produce By-Products

The millions of bones that are thrown away every year help to make a flourishing industry. The by-products and uses are practically endless, and there is no waste. Bones go through many stages. First they are boiled until all the fat is extracted; this is made into glycerine and certain types of lubricants. Skin and marrow bones are used for making handles. The rest are ground into fine powder in vast mills and have an infinite number of uses. A certain amount of this powder is used to make bone-meat and bone-meal for farmers. It is extremely valuable. Sugar, salt, and other refineries utilize bones in some of their refining processes. Bones are also used for case-hardening cast steel. The worst part of old bones is their powerful and penetrating odor, which, strange to say, is not in the least harmful. Asthmatics and those suffering with lung trouble often find relief when working in such an atmosphere.

Highly complex and delicately balanced, the associated flora and fauna of the forest contain an abundance of material on which much of the prosperity of a nation depends, declared Prof. A. W. Borthwick, president of the botany section of the British association, at the annual meeting in Scotland.

Professor Borthwick said the destruction of forests was increasing at a rate which gave serious apprehension as to their ability to withstand increasing and unscientific exploitation.

The professor gave the opinion the main trouble was that in the past the woods had not been managed with a view to natural regeneration; under light increment treatment, the more open canopy and crown room enabled the trees to respond almost immediately to the influence of the seed falling.

Although it had not been decided whether forests increase rainfall, it could be claimed the forest is of great importance as a conservator of water and as an equalizer in the drainage of the land.

"Where no forests exist in the upland or collecting regions of watersheds, the rain falls unimpeded, beating the surface hard or eroding it down to the bare rock," he pointed out. "There is nothing to check the downward rush of water, which collects into mountain torrents which gush unbridled into the main rivers and streams, causing them to become swollen and flooded. The damage done by severe and sudden floods to roads, bridges, agricultural crops and stock, including human habitation, is well-nigh incalculable."

Where forest existed in the upland districts or collecting ground of the water, rivers were more uniform in their flow, year in and year out, and carried much less silt and debris.

Rain broken by the tree crowns percolated more slowly into the soil and found its way into springs and watercourses. Further the influence of the forest was that the melting of the snow was held or retarded, the water being absorbed and stored and floods avoided. The forest regulated the off-flow of water after heavy rains.

Demand For Vegetables

People Eating More And Output Has Greatly Increased

Government reports tell of the increased output of vegetables in the past half century. Home gardens are given more attention and highly specialized vegetable farms have been developed near the centres of population. Shop windows offer many kinds of vegetables from plain cabbage to the bright luscious peppers. The housewife has become vegetable-minded and if she has no garden of her own she purchases freely and regularly the sorts that are in season.

At the meeting of vegetable growers in Toronto recently one of the speakers from Washington, D.C., made a comparison of the menu for an English banquet of sixty years ago and one prepared at a New York hotel a year ago for home economists. The earlier bill of fare started with thick soup, roast fatted fish and four kinds of meat, followed by substantial puddings and rounded off with Stilton cheese. Whatever vegetables were used were in quantities too small to be worth mentioning. The modern banquet, planned with a view to economy and health had for decorative effect radishes, green olives and cherry hearts. There was soup with a Russian name but entirely vegetable in its composition. The main course was roast veal with green peas and a pineapple salad. Strawberries and ice cream made the final course of this substantial meal which was planned to give a proper balance between meat and vegetables.

Just As Easy

"Mummy, do you say 'It is me!' or 'It is I'?"

"Always remember the rhyme. It is 'I' said the spider to the fly."

"But couldn't you say 'It is me,' said the spider to the fly?"

How It Originated

Two Explanations As To Source Of Term "Grass Widow"

The term "grass widow" is said to have originated among the Anglo-Indians about the middle of the Nineteenth Century from the practice of European husbands residing in India sending their wives and children to the hills during the hot season. In this section the grass is plentiful.

A more plausible suggestion is that it arose in America during the gold rush in California; a man not infrequently put his wife and children out to board, while he went to the diggings. This he called "putting his wife to grass."

By Ruth Rogers

449

YOU'RE LUCKY AND CHARMING—
ISN'T IT!

Spotted white silk to add gaiety to your wardrobe.

Fashion centres much interest in spots particularly light navy blue spots on white ground for sportswear and town wear.

It is fabulous silk, that is so easily washed and ironed. The shirtwaist collar is finished with a dainty self-fabric frill, with picot-edge done professionally. The edge of the sleeve is rolled by hand. And isn't the rest of the frock simple enough to make?

You may also choose from the delicate ice-cream pastel tub silks, textured stripes linens, checked seersucker, shifting silks, etc.

It's also stunning in black satin with the belt fastened with rhinestone buckle with the collar frill of tucked white net.

Style No. 449 is designed for sizes 14, 16, 18 years, 20, 22 and 24 inches bust. Size 16 requires 3½ yards of 30-inch material with ½ yard of 30-inch contrasting.

Price of pattern 20 cents in stamps or coin coin is preferred. Wrap can carefully.

J. E. Gooder - Editor & Manager

A Lost Opportunity.

Eager buyers have subscribed
for the \$250,000,000 worth of bonds
offered by the Dominion government.
There was never any doubt but
what they would do so. Canadians
sometimes do foolish things when
they go to the polls, but they know
a good buy when they see one.
With the experience of the last
four years in mind where else
could they feel safe in putting money
as a permanent investment, save
into government bonds? That was
the proposition as viewed from the
standpoint of the investor.

From the public point of view
the re-borrowing of the money
means a reduction of some \$3,500,000,
a year in interest bill. That is
good business—as far as it goes.
It would have been twice as good
to issue the money, pay off the old
bonds, and thus save \$11,000,000
a year in interest.

Not only so. The \$250,000,000,
handed to the owners of the old
bonds would have gone immediately
into the market seeking investment.
Farmers and owners of town lots
would have been able to borrow money
to build homes, and value would
have started to creep back into
real estate. Mortgages could have
been re-financed on easier terms.
Business loans would have been
made available at lower rates of
interest.

The broad effect would have been
to help reduce the fixed charges
on investment in business enterprises
and family homes. In degree,
Canada would have deflated its over-
head, as it has already deflated wages,
and strengthened its position to
produce cheaply and sell its export
products against its competitors.

Hon. E. N. Rhodes missed the
biggest opportunity for public service
that can ever come to him, when
he decided to re-borrow, instead of
to create new money, and pay off
his maturing bonds.—Edmonton
Bulletin.

Outlines Policy of Tree Planting

Extensive forestation plans for
Alberta are practically no secret to
planters and very little to the gen-
eral, were outlined by Premier
R. G. Reid in the course of an ad-
dress delivered before Calgary Ki-
wanis, Thursday.

To date, the government from its
forestry station at Oliver has shipped
many thousands of young trees to
farmers. The policy has been to
supply the seedlings free, the recipient
being called upon to pay express
only.

Along with considerable experi-
mental work as to varieties, the
government is growing trees from
seed, approximately four years
being required to bring sufficient
growth to permit shipping.

In addition to the large station
at Oliver, sub-stations are being
established in connection with gov-
ernment institutions at Fort Sas-
katchewan, Ponoka and Lethbridge.
They, apart from encouraging
people of the district to become "tree-
minded," are operated at practi-
cally no additional expense.

Move to Control Firearms Traffic

The Canada Gazette announces
that after January 1 next, any
person found to be in possession of
a pistol or revolver, when its own-
ership has not been registered with
the police, will be liable to a fine or
imprisonment, or both. This gives
effect to an amendment to the Crimi-
nal Code passed at the last session
of parliament.

Application of this ruling should
be of material assistance to the
police in controlling the illicit traffic
in firearms. Henceforth a permit
will be required to purchase a revolv-
er, and all present owners of de-
ad-licensing weapons will be obliged to
register with the police the type,
number and other details of identifica-
tion.

There are probably hundreds of
homes which contain revolvers that
are never used and should not be
used. A revolver in a home is less
a protection than a menace. It may
fall into wrong hands, and for this
reason it would be most desirable
if deadly weapons were turned over
to the police as was done in Great
Britain not long ago, following an
appeal by the authorities. A law-
abiding citizen has no need to use a
weapon of the kind and would be
better without it.

The Ottawa Citizen makes the
essential suggestion that a stiff
license fee might well be imposed
on the ownership of firearms. This
would serve to facilitate their being
turned over to the proper authorities
for safekeeping.

Try a "CLASSIFIED"—For Sales or Trades

The hunting season is
here. In Canada the
range of early frosts
in the air and
the maples, like banners
of crimson and
gold against the dark forest
and woods, present a
picture that once again the
woods are at their best.
The woods are at their best
now in dark and black, the
deer has his horns furnished to
him by the end of the black
shed the skin and the lustre
of the grey is a study in

dark and grey. The long-horn sheep
in red and white and the caribou in
the prime. The grouse and woodcock
are plump and contented in the
coverts, while the ducks and geese
are gathering in favourite feeding
grounds in preparation for the
long flight south.
The game areas of Canada,
scattered from ocean to ocean,
are readily accessible from any part
of the continent. It is not a country
for the wealthy sportsman only;
the hunter with moderate means

may also be suited. Local residents
can enjoy a trip at a very reasonable
cost. Sportsmen from other lands
are welcome and are only asked to
show their appreciation of the privi-
lege of access to her game fields
by obeying the hunting laws and
observing the ethics of sportsmanship.
A publication entitled "Canada's
Game Fields" which should be of
interest to sportsmen planning a
hunting trip in Canada may now
be had upon application to the
National Park of Canada, Depart-
ment of the Interior, Ottawa.

Mountain View Notes

Deepest sympathy is extended to Mrs. Ellis Barnes in the recent loss of her father. The news of his death came as a great shock to her.

At the recent meeting of the Hospital Aid it was decided to hold a supper in order to raise funds. This will be held on Saturday, October 27 in the Knox United Church. Bazaar, and a charge of 25c will be made.

The missionary lecture illustrated with lantern slides which was given in the Hall on Sunday morning by Miss M. Finlay, who is on furlough from her duties in Nigeria, was well attended and appreciated. The missionary lectures given at the Hall this year have been most instructive.

The Misses Elsie and Jean Macpherson, Allen Macpherson and Miss Eileen Vicary, all of Spring Bank, Calgary, were Sunday guests at the home of Mr. and Mrs. Basil Atkinson.

Burnside Notes.

Lone Pine W.I. are putting on a novelty dance in the Hall on Friday evening, October 26.

Lone Pine W.I. met in the Hall last Thursday afternoon, when Miss Helen Pross gave a splendid paper on Immigration. Mrs. B. Woods will have the next meeting, Thursday, November 8.

Mr. Kasper Sanford is having an auction sale Friday, October 26.

Mr. Bill McCulloch spent Sunday with friends near Acmé.

Mr. Sam McAllister was a visitor at the Eckel home Sunday.

Mr. Fred Doll left Wednesday for a visit to his mother and other relatives at Woodcock, B.C.

Miss Edna Sittler, who has spent the past six months with her uncle, Mr. Geo. Metz, returned on Sunday to her home at Alliance, Alta.

Miss Gretta Metz is visiting her home here, and on Tuesday evening together with Miss Bertie Metz, Mr. and Mrs. Otto Bittner and Freddie Metz, called on Mr. and Mrs. Eckel.

Development of Tar Sands.

Around McMurray, in the northern part of Alberta, there are enormous beds of bituminous sands, which have only waited for the discovery of a simple process for the separating of the hydrocarbons from the sands, to become the basis of one of the largest oilfields in the world.

For many years much engineering skill and money have been spent in an endeavor to perfect a simple, efficient process, and just recently Mr. Max Ball of Denver and his associate Mr. McElvay, have, after many years of effort, evolved what appears to be such a process. There has been set up in Toronto a pilot plant for the separation of the sands and within the next two or three weeks there will be joined with it a new type of refining plant designed by the Smith Engineering Co. of Los Angeles.

Those who have seen on the preliminary tests on the separation unit pronounce it to be a complete success and there is every reason to hope that the combination plant will be the solution of the problem of the development of this vast, natural oil and asphalt resource. The solution will mean complete independence of the British Empire for oil.

TEETHING FEVER

Relieved

Mrs. Edward James' baby had two teeth when he was three months old. She writes: "He has now four and I can truthfully say that giving him Baby's Own Tablets while cutting his teeth kept him fit and well. Teething is a restless feverish time for babies but the little one can always be soothed and the fever relieved by giving sweet, safe Baby's Own Tablets. Very easy to take, no after-effects. Price 25c everywhere."

Dr. Williams' **BABY'S OWN TABLETS**

WORLD HAPPENINGS BRIEFLY TOLD

Bound for England after six years as British high commissioner to Canada, Sir William Clark sailed from New York to Great Britain.

The British Columbia government will construct a new bridge across the Fraser river at New Westminster. Premier T. D. Pattullo has announced.

A new deal for soap-box orators was declared when Robert Moses, commissioner of New York parks, announced that nine city parks, in addition to traditional Union Square, will be available for open-air meetings.

The general business outlook in Great Britain has brightened since June. Sir Donald Stoop, well-known British economist and a director of the Bank of England, declared before members of the Aberdeen Chamber of Commerce.

An Irish Free State army aeroplane with three occupants crashed in the garden of Judge Meredith's home at Dublin. Lieutenant Arthur Russell and Private Twomey were bumped to death; Sergeant Canavan escaped clear of the wreckage but was seriously injured.

With a view to developing a market in Japan for British Columbia sheep, the government has made a trial shipment of sheepskins for trading purposes. Premier T. D. Pattullo said. The shipment was made by the Hean Maru.

Film Stars' Handwriting Analysed

By LAWRENCE HIBBERT (Graphic Analyst)

(All Rights Reserved)

Editor's Note: This article will be found especially interesting, dealing as it does with well-known film stars. What does your handwriting tell? See the ILLUSTRATION following this article.

A correspondent sends me samples of the writing of several well-known people, and asks me to analyse the writing for her. There is no much of interest in these analyses, that I am making them the subject of a special article.

Perhaps you have wondered why many men have been led into the different pursuits in which they have gained fame and fortune. It might have been, if different individuals had been with traits of character that were entirely different from the real characteristics of their nature.

Men and women are born into this world with definite talents and abilities that they must learn in order to take full advantage of them. Some go through life and never learn their proper talents, while others find and develop them early in life.

Ramon Novarro, the prominent film star, is particularly fortunate in finding his talent and making it the driving force in which he is writing shows, as well as those who have seen his films know that he can interpret a role in a way that few people can even approach, but he has also another ability and another very outstanding talent with which he has won recognition. His ability in music. The rhythm and breaks in his writing show immediately to the handwriting analyst a talent and appreciation of the musical arts.

As an operatic singer, Ramon Novarro has achieved fame that is not often given to a man. His talent in music, which he has, perhaps, his first choice of expression.

He has still another characteristic, another ability. His writing shows an ability to use his hands in a creative way perhaps in painting, sculpture, or some other means of expression. Few men are born with such pronounced artistic ability in so many lines—drama, music, and the sculpture arts.

Take the handwriting of John Boles, another star. The dominant trait in his character is his self-reliance. This is the quality that makes him depend only on himself for anything that he wants done. He is not sure (quite the contrary) to his

MAKES FALSE TEETH FEEL LIKE NATURAL

There must be a reason Dr. Werner's Powder is the world's largest seller and prescribed by leading dentists. It holds teeth so firmly—they fit so comfortably—that all day long you forget you're wearing false plates. Leave no colored, gummy paste—keeps mouth sanitary, gives pleasant, moist powder you can buy yet costs—almost—any druggist.

many friends, but, at the same time, he looks to one man only to get it—and that man is himself.

John Boles could not be anything but if he desired, there is an independence of thought and action that will not allow him to think of help when he has a problem to face. He is close-mouthed about his personal affairs, and will usually have them solved before other people have heard about them. Decide, quick thinking, a man of action John Boles.

If you want a personal reading of what your own writing reveals, send a letter in your normal handwriting and state your birthdate, with 10 cents coin, and a stamped (3c) addressed envelope. You will be surprised at the revelations of your character and talents. If you enclose more than one specimen for analysis, please enclose coin for each. Address: Lawrence Hibbert, Graphic Analyst, c/o Winnipeg Newspaper Union, 175 McDermott Ave., E. Winnipeg. Replies will be mailed as soon as possible, but please allow at least two weeks for reply.

Gold Strike

Find Of Great Importance In Northern Saskatchewan

Strike of gold on the shores of Lake Athabasca in north-western Saskatchewan is a find of major importance, according to Hon. T. C. Davis, C.E.

Mr. Davis returned from Edmonton recently, where he met several prospectors just back from Lake Athabasca. Reports were favorable to the gold find, he said.

The strike lies 60 miles east of the Athabasca town in Saskatchewan, and is easily accessible by water, since the quartz lies right on the lake shore. Assays as high as \$150 have been reported.

Fat which has become slightly tainted, or fat that has been used for deep frying, may be clarified and rendered sweet again by boiling it with a few slices of raw potato.

SUNDAY SCHOOL

By JACK MINER, Canadian Naturalist

"The little boys that I worked with in Sunday School twenty-five years ago are today the live wires of our church executive. In other words the Sunday School boys of today are the foundation of tomorrow's Church and Christianity. And without some form of way of introducing our children to Jesus and His ways our church and Christianity are bound to go down, and if we allow our established Christianity to go down we use the very seed of the most prosperous and looked-up to continent on the earth today. We

could be no underprivileged, handicapped, uneducated, man rise up and lay his grey hairs respected by all classes of people more than I have in the last twenty years. It all started when my little seven-year-old boy took me by the hand and led me to the way of the Sunday School over thirty years ago. Remember, Sunday School and Christianity are the foundation of our public schools and all other good things that follow. The best public school teachers I have known, producing the best results in the public schools, were, in

GAME PRESERVE NO SHOOTING ALLOWED.

BECOME A JACK MINER BY FEEDING AND PROTECTING THE WILD FOWL.

Jack Miner's Influence. The photo shows a sign placed by a lake in British Columbia on Vancouver Island, which is 5,999 miles more or less from Jack Miner's home.

will do as other nations have when ever we ignore the blessed privilege that is losing freedom and also that we may live.

Moreover, I wish to say that I know no better or more permanent way that a young man can develop a smiling confidence and Christian character and loyalty in his own heart than by teaching a class of boys in Sunday School. In other words the more we invest in the Sunday School the greater our daily income of blessing is.

Personally I have nothing to say of, but all to thank God for, as they

every case, Christian Sunday School teachers.

My public school education was extremely limited to the first, or A.B.C. book but through the Sunday School, and it alone, I am now able to read and write and am now writing my third book. As far as education is concerned, the same can be said of my father, who never went to public school one day in his life, but his Sunday School teacher taught him to read.

Thus I have just reason to bow down and thank God for the Sunday School and its influence.

Little Journeys In Science

ATMOSPHERIC PHENOMENA (By Gordon H. Guest, M.A.)

Due commonly associated with the gritty particles which fill the air in the course of "dust storms", is in reality responsible for some of the greatest beauties in nature. Blue skies, purple twilight and rain drops are caused by small dust particles which fill the air. Day would be almost as black as night, scientists say, if it were not that the particles of dust break up all the components of white light except the blue which we see in the sky. Sunset, with its richly-colored clouds, is the result of dust particles blotting out all the seven colors which combine to make white light, except those we see reflected in the sky. Twilight is the reflection of the slanting sunlight from particles of dust high in the air.

To dust, too, is due the rain and snow fall. Moisture in the clouds forms into drops or flakes by clinging around the small dust particles suspended in the air. Rain clouds usually travel about a mile above the earth.

The "ring around the moon" which is a common phenomenon in cold weather, is caused by ice crystals in high clouds. The crystals break up the moon's light and scatter some of the colors, reflecting others and giving the familiar effect. "Sun dogs" across the sky are produced in this same way.

Sun spots activities projected on the atmosphere, are responsible for two other common spectacles in the sky, the aurora borealis and the rainbow. Contrary to popular belief, the rainbow forms a full circle in the sky, and not the arc which we are familiar. Could man ascend high enough into the air he would perceive the rainbow in its entirety. This has been accomplished by airmen in recent years.

Interesting Discovery

Find Location Where Pagans Rituals Of Indian Snake Dance Held

Deep in the almost inaccessible bush country of the Whiteshell forest reserve, white men now know for the first time perhaps where the Pagans rituals of the Indian Snake dance cult were performed.

Archaeologists were enthusiastic over the discovery of a series of monumental stones believed to mark the spot where the Indian ceremonies were carried out.

Location of the stone is on the Whiteshell river near the Manitoba-Ontario boundary and about 100 miles due east of Winnipeg. On or about September 1 to 3, Harry Rand, B. W. Cartwright, Percy Stokes and Mrs. Percy Stokes, all members of the Manitoba museum, made the discovery.

The party travelled in hours by power boat, canoe and on foot after reaching the Whiteshell river before they came on the ceremonial site.

Dr. H. M. Speechly, president of the Manitoba museum, declared the find was of international importance. At an executive meeting of the museum board it was moved to have the discovery placed either under the protection of the Manitoba government, the Royal Canadian Mounted Police or both.

Weather beaten stones over an area estimated variously at four to six acres mark the site. Dr. Speechly said he believed that in pre-white man days, probably 400 or 500 years ago, either the Cree or the Chippewyan Indians, belonging to the Snake cult, practiced their ceremonies on this spot.

Artificial Drying Best

Sun Destroys Large Volume Of Food Properties Of Hay

"Making hay while the sun shines," is poor conservation, leading to inferior food for animals and indirectly to loss of richness in human diet. Before the British Association for the Advancement of Science, at J. Page and Dr. S. J. Watson explained another, when it is used to dry hay, destroys a "surprisingly large" volume of its food properties.

Artificial drying, they said, is the ideal method of fodder conservation.

The oldest birds in the world were about the size of crows

Stay On The

Rolled Standard

It seems difficult, sometimes, to stay on the Gold Standard, but the "rolled" standard—ah! that's something else again. Once a man has "rolled his own" with Ogden's Fine Cut he's on this "Rolled" standard of smoking enjoyment for life.

Ogden's is mighty easy to roll and it does give a smoother, cooler and more fragrant smoke... To try Ogden's is to like Ogden's—particularly if you use "Chanticleer" or "Vogue" Cigarette Papers. Ogden's Fine Cut and either of these makes of cigarette papers assure you a standard of satisfaction that's well worth staying on.

SAVE THE POKER HANDS

OGDEN'S FINE CUT

P.S.—At any POKER HAND Premium Store, or by mail, you can get a large booklet of "Vogue" or "Chanticleer" cigarette papers in exchange for one complete set of POKER HANDS.

Your Pipe Knows Ogden's Cut Plug

Now You Tell One

Old Sol is "mother" to two chicks at Jonesboro, Arkansas. After Billy had quit her nest in a field with only a few of her eggs hatched, Old Sol beamed down on the nest and two weeks later two more chicks broke through the shells. The sun-hatched chicks are quite normal and healthy. Mrs. W. D. Cobb, owner of the strange brood, said.

Didsbury Pioneer—Established a quarter of a century.

Riding of Bicycles on Sidewalks A Menace.

Bicycles ridden on the sidewalks in disregard of town regulations are a menace as well as a nuisance. So are those ridden at high speed along the streets in defiance of traffic regulations.

Four pedestrians were killed by bicycles in Toronto during the first nine months of this year. Many other persons were injured when struck down. That should be sufficient proof that bicycles are not harmless.

Because of the lighter nature of their vehicle many cyclists have the notion that they need not observe stop signals or speed limits, as the motorist must do. This notion should at once be dispelled by the authorities responsible for traffic control.

The bicycle in many respects is more dangerous than the motor car, because of its ability to rapidly change direction. Statistics prove that its power to inflict injury or death is second only to that of the automobile. In proportion to its numbers its record of fatalities is little better than that of 4-wheeled carriers.

Traffic regulations are intended to apply to all vehicles. It is up to the officers of the law to see that the intention is carried out.

Donations are Asked for the Red Cross.

LOCAL & GENERAL

See "Woodie" for Coal.

Miss Lucille Smith was a visitor to Calgary over the weekend.

Looseleaf pads for maps, etc.—5c each at the Pioneer.

Mr. H. W. Chambers paid a visit to Calgary on Sunday.

C. E. Reiber has commenced the building of a basement under his office building.

The Misses Margaret Geiger and Dorothy Ranton were visitors to the southern city last week.

Teachers—Before purchasing your report cards see the sample at our office.—Didsbury Pioneer.

Mr. and Mrs. J. Johnson and family of Calgary were visitors over the weekend with Mr. and Mrs. J. S. McCloy.

Grand Opening Hallowe'en Dance—Mountain View Community Hall, Tuesday, October 30. Halliday's Orchestra. Cents 50c. (42c)

Mrs. Hank Wall and infant daughter left Wednesday for Leduc, Sask. where she will visit her parents and old friends.

Messrs. Alf Durrer and Albert Meston have moved to Lacombe, where they have opened a hamburger restaurant.

Mrs. K. A. Blatchford and Miss M. Cunningham of Edmonton were visitors with the Ranton family for Thanksgiving.

Mr. and Mrs. Molyneux of Calgary visited with Mr. and Mrs. Jack Fleury on Monday. Mrs. Molyneux is Mrs. Fleury's sister.

Miss Vera Wiedeman will do sewing at Mrs. Wilson's Ladies Wear Store. Remodelling and making up new clothes at reasonable prices.

The Hospital Aid will give a "Boston Baked Bean Supper" in the basement of the United Church on Saturday, October 27, 5:30-7:30 p.m. Admission 25c.

Messrs. A. Briscoe and Alex. McNaughton, secretaries of the local Municipal Districts, will be in Ods during the balance of the year for the purpose of collecting taxes.

The contractors on the Evangelical Church building completed their work this week. Finishing of the basement is now proceeding. It is expected that the opening ceremonies will be held Sunday, Nov. 11.

Miss Jean Russell underwent a successful operation in a Calgary hospital last weekend, and is making a good recovery. Mrs. Harold Stouffer of Ods is relieving as stenographer at the local branch of the Royal Bank during Miss Russell's absence.

Sharp's Circuit Shows are making a special price of 25c. to all regular shows for school students over 14 years of age. To qualify for this concession it is necessary for the student to have a card signed by their teacher. Cards can be obtained at the box office.

The first of a series of social evenings under the auspices of the W. A. of St. Cyrian's Church was held at the home of Mrs. Lowrie on Friday. An enjoyable evening of whist was greatly appreciated. Prize-winners were Mrs. Durrer and Mrs. Pitt, ladies, and Mr. J. D. Thomas and Mr. D. Pearson, gents.

"Weiser," a rangy boy with a disposition about as sweet as a chili pickle, probably reflected over his oats Tuesday that at last he had met his master. Jackie Cooper of Sudre climbed a stile on Weiser's unwilling back Monday night and rode him to a fare-thee-well to win the branch-busting contest at the Madison Square Garden's (N. Y.) ninth world championship rodeo.

The regular W. C. F. U. meeting convened at the home of Mrs. Harriet Gabel on Thursday last with twenty ladies present. A report of the recent provincial convention held in Calgary was given by the delegate, Mrs. Arden Deadrick, who, in the course of her report stated that during the convention the Didsbury Y.P.B. were presented with the banner for having the largest gain in membership in the province last year. After the meeting a social for 4-hour was enjoyed over the teneques.
